FAQ

Toronto Police Service is committed to the ongoing release of open data for public safety, awareness, greater openness and transparency. The Service's Open Data Program strives to release valuable open data and provide continuous support for public understanding, use and application of police information.

The Toronto's Police Service's Annual Statistical Report (ASR) is a comprehensive overview of police related statistics including reported crimes, victims of crime, search of persons, firearms, traffic collisions, personnel, budget, communications, public complaints, regulated interactions and other administrative information.

The 2019 Annual Statistical Report and subsequent annual reports will be provided in open data format accompanied by a wide range of supporting analytical tools that will enhance public interaction and improve understanding of the Service's annual statistics.

The open data release of the ASR consists of several components designed to meet the standards of open data provision and increase open data literacy through open analytical tools and supporting documentation. The ASR open data is hosted in ESRI's ArcGIS Online platform which the Service licenses and leverages to provide police open data.
